Introduction

FamilyVISTA is a project that aims to redefine how families connect, share memories, and preserve their legacies. This innovative web application enables users to build intricate family trees, where each member enjoys a unique customizable profile with comprehensive privacy controls.

Familyvista goes beyond the conventional family tree builder by incorporating a plethora of distinctive features and functionalities.

Problem Statement

In today's fast-paced digital age, families often struggle to maintain strong connections, share memories, and preserve traditions across generations. There's a lack of a comprehensive platform that simplifies the creation of family trees, fosters real-time interactions, and respects privacy.

Our project, **FamilyVISTA** aims to solve this by offering a user-friendly web & mobile application. It facilitates collaborative family tree building, memory sharing, and real-time communication, ensuring that families remain close-knit, memories endure, and traditions thrive.

Motivation

FamilyVISTA is motivated by the following key factors:

1

Preserving Memories

2

Strengthening Bonds

3

Celebrating Traditions

4

Fostering Communication

5

Prioritizing Privacy

Poster

FamilyVISTA

Objective

"To develop an immersive virtual reality platform connecting individuals with their ancestral heritage and facilitating meaningful interactions among current family members."

Architecture

Timeline

PHASE 01

- Project Planning And Designing
- User Interface Documentation

PHASE 02

- Web App Back End Development
- Web App Remaining Features
- Interactive Tree Builder

PHASE 03

- Mobile App Features
- Geo Graphic Mapping
- Web App Remaining Features

PHASE 04

- Review
- Integration of all modules
- Testing and Improvement
